

KINDERGARTENS

Be careful and monitor the risk level for the spread of the coronavirus

For each risk level, the instructions for the previous level must also be followed. The higher the risk, the more careful we need to be. Together, we will find the solutions to keep the risk level as low as possible.

To prevent the spread of the coronavirus, our kindergarten teachers have to follow the recommendations below, and we ask **parents** to do the same:

LOW RISK

- do not come to kindergarten or daycare if you are ill, take a COVID-19 test if you suspect you might have it
- if your child is sick, do not bring them to kindergarten
- notify the child care institution of a positive coronavirus test of your child or the fact they are self-isolating
- the child care institution ensures proper ventilation and takes risks into account when planning events

MEDIUM RISK

- leave your child with the kindergarten teacher outside the building if possible
- the child care institution restricts the stay of third parties in the kindergarten or daycare building
- the child care institution carries out activities in the same groups on a permanent basis
- the child care institution organises events outdoors where possible

HIGH RISK

- if possible, do not take your child to kindergarten or daycare
- do not enter the building of the child care institution
- keep a safe distance
- the child care institution carries out activities with children only for one group at a time and, if possible, outdoors

VERY HIGH RISK

- do not take your child to kindergarten or daycare unless it is unavoidable
- recreational activities and events are not organised

Are you

vaccinated?
